

# Outcomes Manager Release 2023.31

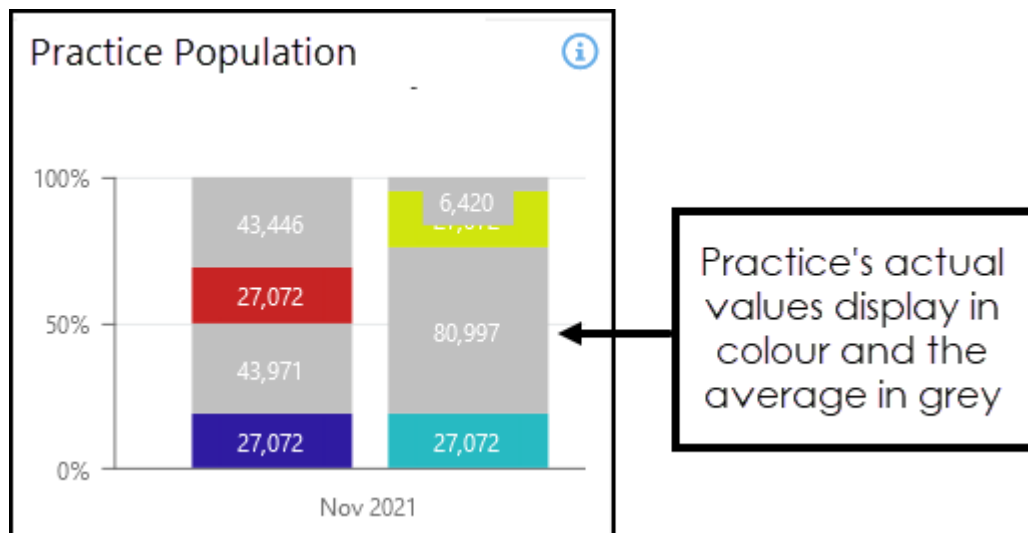

## Summary of Changes

**Outcomes Manager** Release **2023.31** contains the following:

- **Sharing Dashboards with Practices**

You can now share **Widget Dashboards** with practices in your locality who are contributing data.

This enables the practices to view their figures against the average for the locality.

---

 **Note** - In this example, **Grey** was chosen for the **Average** values.

---

- **Sharing Dashboards with Organisations**

**Super Users** can now share **Dashboards** with **Organisations**, for example, a federation.

- **Outcomes Manager User Assistance**

The link to the **User Assistance** has been updated, and now takes you to the relevant section of the **Help**.

For example, if you select **Help** when using **Reporting**, you are taken straight to the **Reporting** section.

- **Unsaved Changes Notification**

If you are making changes to an entry form on the right hand side of **Outcomes Manager**, and close without saving your changes, a notification displays "*Do you want to discard your changes?*".
