Vision Release - DLM 421

DLM 421 brings the following software fixes to Vision:

HPA Reports

- Monthly report generation now only includes data from the current month – previous months can no longer be erroneously submitted.

Miquest

- **Analyse queries** – The issue with Miquest analyse queries showing the following error "*Unspecified error while running query. GQL Error: 'GROUP G1 is never referenced"* has now been fixed.

Scotland

- **ePrescribing**

    – The pipe mark character "|" is now accepted in AMS dosages.

    – Vision now logs the last 5 days of message history. This will assist helpline should they need to support ePrescribing messaging issues.

- **SCI Diabetic Care** – The issue with duplicate extracts being generated and overloading the SCI DC extract has now been resolved. This also solves any storage space error messages you may have received.
