

DLM 314

Summary of Fixes

- **Problems:**
 - You can now drag and drop data from the Current Consultation/Topic.
 - Problems are now listed in Short Name order.
 - Text displayed in a problem can now be viewed on the problem tab.
 - When adding a new Problem, you are now prompted to add a Medical History entry.
 - New problems will be open, to enable data entry directly into the problem. Adding another problem will close the previous problem, the new problem is opened.
- **Therapy:**
 - Following DLM 310, when pressing F3 after printing a batch prescription, you were prompted to open the **select drug** window not **select a patient** window. This is now fixed.
- **Patient Merge:**
 - Contacts for the merged patient only, will be included in the patient merge.
 - No consent details will be merged. Following a patient merge, go to Registration and add the relevant consent details manually.
- **Journal Tab:**
 - Ability to sort the column headers on the Journal and filtered tabs view has now been fixed. Right mouse click on Description and select **Sorted by – Read Code, Type of Data** or **Description**.
- **SCR initial upload:**
 - When running the SCR initial upload, you can now access all patient records with the exception of the patient currently being uploaded.
- **Appointments:**
 - **Did Not Attend Reports** – The date of the DNA'd appointment is now displayed.
