# DLM 370 User Guide

## Clinical Audit Changes

DLM 370 brings the following changes to Clinical Audit:

### Show/Hide Inactive GPs

The GP Analysis tab no longer displays inactive GPs by default. If you would like to display inactive GPs in this tab, please tick the new **Show Inactive GPs** filter:

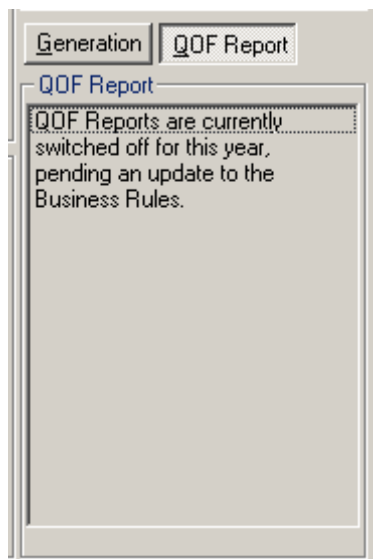

*Clinical Audit – GP Analysis – Show Inactive GPs*

Points to note:

- If an inactive GP has **not** had their registered and usual patients transferred to an active GP, the patient totals may not match the audit line count of patients.

- For the Show Inactive GPs filter to work, you must ensure that relevant staff are marked as Inactive in Control Panel  - File Maintenance.

- The Show Inactive GPs option is not available when you are using the Select Patient Set option in the GP Analysis tab.

## Mail Gateway – QoF Report

The QoF Report section in Mail Gateway now tells you if your QoF reports are disabled:

*QoF Report Section of Mail Gateway Screen*

## HPA Seasonal Influenza Audit Changes

The HPA Seasonal Influenza Audit has been updated for 2011-2012. The dates now include 1 September 2011 to 31 March 2012. Plus the following changes:

- All date of births have moved on a year.

- There is one risk group for chronic neurological (whereas last year there were groups for stroke and CND/MS/cerebral palsy).

- There is no reporting on Pandemrix.

- There are some Read code changes to at-risk groups.

- Some sections of last year's claim audit are no longer required and have been removed.

- Pregnancy criteria for call and recall have changed.

Please see Clinical Audit on-screen help for further details.

**Note the electronic reporting element of the seasonal flu audit only applies to Scotland in this DLM. However, English practices can download this functionality separately from the INPS website – User Assistance - England (English VES practices should have this installed.). This functionality will also be included in a future DLM.**
