

DLM 321

Overview

DLM 321 brings the following fixes to Vision:

Unknown Priorities

From DLM 321, all medical histories with no priorities are now visible from the unknown priority filter only and are no longer visible from other priority filters.

Default Dosage Instructions

In DLM 320, for items with no default dosage, we added default dosage instructions to display "use as directed". Due to customer requests, we have now reverted this to display empty for you to populate as required.

Prescription Manager Filter

Prescription Manager now displays all items in the last 6 months.

Practices using Terminal Services

The issue with certain terminal service sessions crashing when the automatic screensaver is enabled has now been resolved.

England

EPS- Nomination

You may find that when trying to nominate a dispensing contractor for EPS Release 2 you get a message stating that there are no dispensers found. This is due to the dispensing contractor list not being available on the Spine and is not a Vision issue.

Wales

2DRX Barcodes

2DrX barcodes are now printing correctly.

Contract Plus

In DLM 320, we encountered an issue with Contract Plus for practices who had not installed DLM 259. This is now fixed in DLM 321.
