

What's New in Consultation Manager

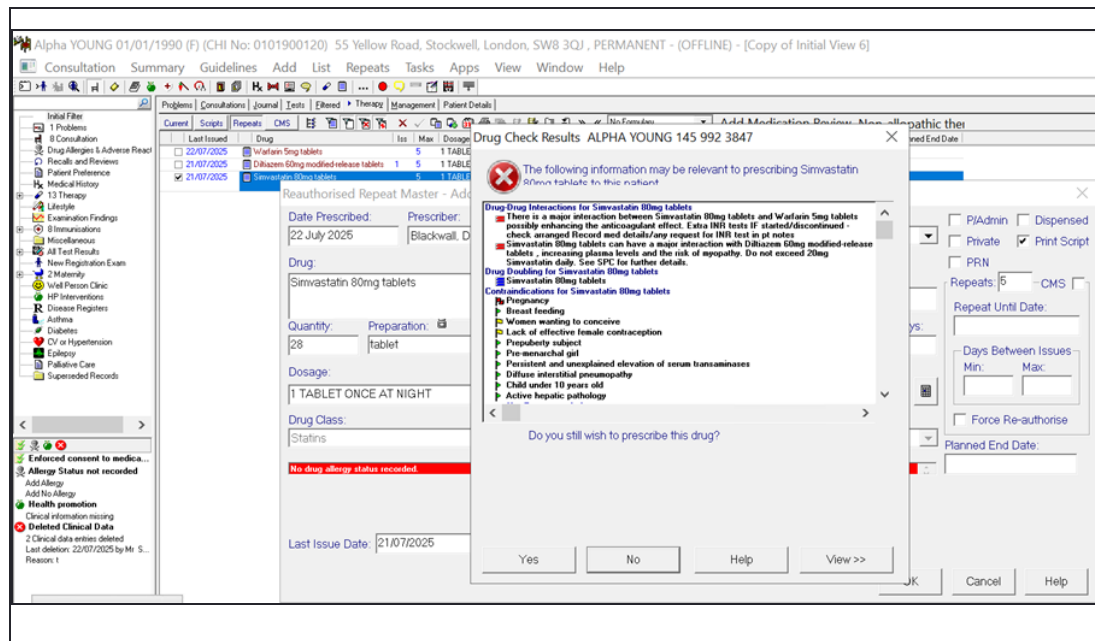

See Vision 3 DLM Release Guides for full release guides.

Vision 3 Release DLM 930

All Countries

Vision 3 release DLM 930 contains the following updates in Consultation Manager:

- Drug checks on repeat reauthorisation
 - When reauthorising a repeat prescription, the drug decision support checks are now automatically run.

- Removal of fully automatic Problem Generation option in Consultation Manager Setup
 - In order to avoid misleading data in the patient record, we have disabled the option to select fully automatic problem generation for all users. If your practice uses problems, you can continue to add problems manually or use the option for semi-automatic problem generation. See Using Problems

- This option has been removed from the Consultation Manager [Setup](#) Management Tab.

The screenshot shows the 'Consultation Manager Setup' dialog box with the 'Management' tab selected. The dialog has a title bar with a close button (X) and a tabbed interface with the following tabs: Consultation, Startup, Data Entry, Patient Record, Drug Check, Management (selected), Therapy, and General.

The 'Management' tab contains the following sections and options:

- Automatic Triggering:**
 - Disable Triggering
 - Passive Triggering
 - Active Triggering
- Indexes on Toolbar:**
 - Local Index
 - Local Reports
 - Reports
- Display Options:**
 - Show local line indicators
 - Auto-Select Drug information for patient.
 - Trigger clinical data entry when selecting Prodigy guideline.
- Auto Selection:**
 -
- Problem Generation:**
 - Manual Problem Generation
 - Semi-automatic generation (prompt for problem generation)
- Therapy Management:**

Association with a problem :	Applies to the following therapy types :
<input checked="" type="checkbox"/> Select problem when therapy is created :	<input checked="" type="checkbox"/> New Repeat Masters
<input checked="" type="radio"/> Only if no open problem	<input checked="" type="checkbox"/> Repeat Master Reauthorisations
<input type="radio"/> Always	<input type="checkbox"/> Acute Prescriptions

At the bottom of the dialog, there is a checkbox: Show Setup Form at Startup. On the right side, there are three buttons: OK, Cancel, and Help.

Immunisations:

- [Immunisations Display](#)
- To improve the readability of immunisation records, the immunisation name now displays in the patient's journal summary and in the output of reports.

Date	Description
31/10/25	  HEPATITIS_B Hepatitis B Stage: 1 Given Routine Measure Due: 30/11/2025
	  HEPB_JUN_AR-Hepatitis B Junior (Add. At Risk) Stage: 1 Given Routine Measure Due: 28/11/2025

	  RUBELLA MMR (Measles/Mumps/Rubella) Stage: 1 Given Routine Measure Due: 30/04/2026
	  MEASLES MMR (Measles/Mumps/Rubella) Stage: 1 Given Routine Measure Due: 30/04/2026

Pandemic Influenza:

- A new influenza type, [Influenza Pandemic](#) is available for the product Zoonotic Influenza vaccine Seqirus.

Childhood Immunisations:

Changes are applied to the following childhood immunisations:

- [MenB](#) and [PNEUMOPREV13](#) - The intervals for MenB and PNEUMOPREV13 have been updated as follows:
 - [Meningococcal B Stage 1](#): The Interval has changed from 2 months to 4 weeks.
Stage 2: Under the new schedule, the booster dose will be given at a 40-week interval from the first dose.
 - [Pneumo conj Prevenar13 \(2 dose\) Stage 2](#): Current interval, 40 weeks. Under the new schedule, it will be given 36 weeks after stage 1.
- [Hepatitis B Junior \(Add. At Risk\)](#)- The option to select a stage 3 dose has now been removed from the main list, check the Show All option to add it.
- [HiB/Meningococcal C](#) - The option to select a one year dose for the has now been removed from the main list, check the Show All option to add it.
- [Hexavalent \(DTaP/IPV/Hib/HepB\)](#) - There is a new stage 4, 62 weeks following stage 3.

Note - Although not required until 2026 the new 4th hexavalent (DTaP/IPV/Hib/HepB stage has been introduced in this release.

- [MMR](#) - the Interval between doses is now 6 months.

Note - [MMR](#)- Interval changes (age-dependent from 01/01/2026) are included in this release.

- **MMRV (Measles Mumps Rubella Varicella)**
 - MMRV is now available as an immunisation type Stages 1 and B. Adding the immunisation creates individual Measles Mumps Rubella Varicella records. - This has been applied as a patch.

See [Adding an Immunisation](#) for details.

For the full details on the JCVI changes to childhood immunisations, see [Changes to the routine childhood vaccination schedule from 1 July 2025 and 1 January 2026 letter](#).

Scotland Only

[NHS Lothian Clinical Portal link](#).

For NHS Lothian customers only: To access the Lothian Clinical Portal from Consultation Manager, follow these steps:

1. From Consultation Manager with a patient, selected go to the Add menu
2. From the Add menu, select External Applications
3. Select Launch
4. Select Lothian Clinical Viewer
5. The NHS Lothian Clinical Portal displays in a new browser window

Note - Vision no longer manages the portal window, it will now open in an external browser.
