

Quick Reference Guide - Add to Register

You can quickly add patients to a QOF/QAIF register using the **Vision+ Add to Register** option:

1. Select a patient in Consultation Manager.

2. From the **Windows Notification Area**, right click **Vision+ Add to Register**:

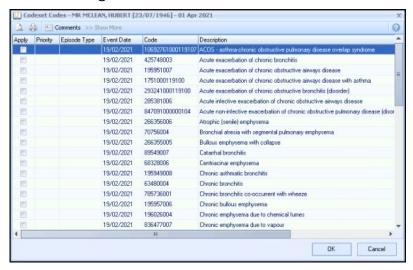

3. Choose the required register from the menu:

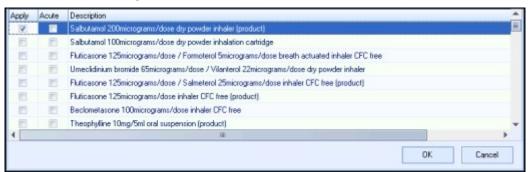

4. The Codeset Codes screen displays with QOF/QAIF compliant codes for the selected register:

5. Select **Apply**. You can also select a priority and enter freetext notes.

Note - Some QOF/QAIF categories require a drug to be present in addition to the diagnostic clinical terms for the patient to display on the register.

- 6. When adding a patient to a register that also requires therapy recording to count for QOF/QAIF, a list of applicable therapy items displays below the clinical term list. You have the following choices:
 - If you want to add therapy Tick the Apply box. If the drug is to be
 prescribed as an acute prescription select Acute, if this box is not
 selected the drug is recorded as a Repeat.

- If you have already recorded relevant therapy in Consultation
 Manager You can ignore this list.
- 7. Relevant prescribing support displays, complete as required and select **OK** to save the data.

Note - Patients who have an end date entered in history or problems in **Consultation Manager** are automatically removed from the **Vision+ Register**.
